

A PHARMACEUTICAL COMPOSITION FOR THE PREVENTION AND TREATMENT OF  
OBESITY OR/TO FACILITATE OR PROMOTE WEIGHT LOSS

Abstract

5      Pharmaceutical compositions are disclosed for the treatment of obesity, an  
overweight condition and compulsive overeating. The pharmaceutical compositions are  
comprised of a therapeutically effective combination of a nicotinic receptor partial agonist and  
a CB-1 receptor antagonist and a pharmaceutically acceptable carrier. The method of using  
these compounds is also disclosed.
